Anchor Plate

New Orthodontic Anchor Plates

This Anchor Plate is made of pure titanium suitable for osseointegration and tissue integration.

Anchor plate is developed to provide intraoral absolute anchorage for the intrusion or distalization of molars.

This plate has three positions: head, arm and body.

Jeil's Anchor Plate does not disturb any kind of tooth movement because they are placed outside the dentition.

Furthermore, this plate is the most distinctive features of SAS in comparison with orthodontic implant systems.

③ Ø0.5

① Minimal Discomfort head design

② Minimize soft tissue infection due to smallest platform and head diameter

④ Suitable thread for thin cortical bone

What makes about Jeil Dual Top® screw so special is, as the name suggests, it consists of dual head and has various head designs.

They can fit in various indications in many clinical applicable cases to provide easy use and patient comfort. FDA approval also confirms safe use.

Inferior head slots can hold wires while upper head can provide various uses since it can hook wires or elastic chains.

Also each screw design has various lengths and diameters, adapting itself in a lot of situations with different inter-radicular distances and soft tissue thickness.

Applicable Sites of **Dual Top®** Screw

Maxilla Placement

Maxillary Bucal Alveolus-within the attached gingiva / plate /
Zygomatic Buttress / Malar Bone

Mandible Placement

Mandible Buccal Alveolus-within the attached gingiva / Molar /
Retromolar area / Symphysis /
Mental region-within the attached gingiva / Mandible Buccal shelf
